

CFI PLATFORM SERVER™

Managed File Transfer for Government

Secure, controlled file transfer across all major platforms

CFI Platform Server™, from Proginet, enables government agencies to secure and control file-transfer activity on all platforms throughout their organization. Whether it's transferring sensitive material between applications, integrating data from business partners and other agencies, or sending large files to centralized data centers, Platform Server is the robust solution agencies need to get the job done right.

Across All Major Platforms, Up to 200 Times Faster

A core component of CyberFusion Integration Suite (CFI)™, Proginet's universal solution for secure, fast file transfers, Platform Server can send files of literally any size with guaranteed delivery. The solution is enhanced with RocketStream file transfer acceleration technology – making it up to 200 times faster than FTP and other legacy systems. Platform Server is the workhorse at the heart of CFI, providing the foundation for secure, controlled file transfers at the highest volumes and across all major platforms including Windows, UNIX (AIX, HP-UX, Solaris), Linux, zLinux, iSeries, and the IBM Mainframe.

Maximized Security at Every Stage of the Process

Typically, Platform Server is installed on multiple servers within your agency's CFI network, often across a range of platforms. Each installed Platform Server on the network transforms that server into a virtual 'Fort Knox' for file control; no file enters or leaves without the server knowing about it and approving the transmission. A full range of encryption algorithms and built-in security and authentication options ensure that your data is completely secure at every stage in the process.

End-to-End Automation, Integration, Efficiency

Security is a key feature of Platform Server. However, it can do much more than protect data; it can be used to completely automate the process of sending and receiving files. Powerful scheduling options and event-driven capabilities enable lights-out automation for all file transfer processes – 24x7 and regardless of location. The solution's peer-to-peer architecture, post-processing actions, and overall automation capabilities enable seamless integration with your organization's applications, and true end-to-end processing. This helps maximize overall efficiencies while driving down operating costs.

Specifications

Platforms

UNIX (IBM AIX, HP-UX, SUN Solaris)
Windows (all Win32)
Linux
zLinux
IBM z/OS (OS/390)
iSeries
VMware

Protocols

CFI Protocol
TCP/IP
SNA

Compliance

Detailed Auditing
Section 508 Compliant
Support for PCI-DSS, Sarbanes-Oxley, HIPAA, GLBA
SMF Record Support
Integration with Existing Reporting Tools

Security

FIPS 140-2 Compliant
X.509 Certificates Support
Data Integrity Checking (Hashing)
LDAP Authentication (including Active Directory)
Data Streaming
Time of Day Access Controls
Centralized Data Repository Not Required
Local System Authentication
Dual Authentication
Trusted Nodes
Proxy Accounts
User Profiles

Integration

API Support
User-Exit Support
Post-Processing Actions
Straight-Through Processing
Scheduling
Enterprise Application Integration
Rule-Based Routing
Rule-Based Processing of Data
Rule-Based Alerts

About Proginet Corporation

Proginet Corporation offers universal, multi-platform software solutions for fast, secure, and inexpensive file transfers both inside and outside the enterprise. Hundreds of companies worldwide rely on Proginet's CyberFusion Integration Suite (CFI)® and Slingshot™ solutions to conduct business more efficiently while protecting customer data and limiting the risks associated with sharing proprietary information with partners and colleagues around the globe. With over 20 years of experience in the managed file transfer arena, Proginet's global customer base spans more than 30 countries and includes many Fortune 500 companies. Headquartered in New York, the company is publicly traded under the symbol [OTCBB: PRGF]. For more information, visit www.proginet.com.

Encryption

Blowfish Encryption
Blowfish Long Encryption
DES Encryption
3DES Encryption
AES Encryption (Rijndael)
SSL v.3 Support
Integrated PGP Support

Efficiency

Compression (RLE, LZ, ZLIB)
Support for Load Balancers
High Availability Clustering/Failover Support

Management

SNMP Trap Support
Centralized Administration of All Components

Automation

E-mail Notification
Checkpoint Restart
Event Driven Transactions
Directory/Subdirectory Transfers
Pre- and Post- Processing of Data
Transfers to Remote Servers/Locations
Remote Command Execution
Automated File Versioning/Naming
File-to-Print Capability

Interface

GUI Client
Command-Line Client

Architecture

Direct File Writing to Local File System
Supports All File Types
No File-Size Limitations
ASCII and EBCDIC Conversion
Online Help

Key Benefits:

Security

Complete data security, FIPS 140-2 compliance, and support for the world's most stringent encryption standards.

Compliance

Ensures compliance with all regulatory mandates (Section 508, Sarbanes-Oxley, PCI-DSS, HIPAA, Gramm-Leach-Bliley, etc.).

Lights-Out Automation

Automates many important steps and processes and enables event-driven transfers for real-time initiation of data movement across platforms. Such process automation is critical to support the fully unattended, "lights-out" requirements at many data centers.

Enterprise Application Integration

An open architecture allow seamless integration with enterprise applications. The solution's full set of open APIs, ActiveX controls, ISPF panels, and REXX and command line interfaces can be accessed easily, enabling users to program directly into your organization's applications.

Accelerated Transfers

Platform Server's built in acceleration technology defeats network latency to deliver speeds up to 200 times faster than traditional FTP. The solution utilizes both the UDP and PDP protocols to maximize speed and performance over long distances and with very large files.

Guaranteed Delivery

Checkpoint /restart and other mechanisms provide guaranteed delivery and detect if a connection drops. Checkpoint Restart resumes the transfer at the exact point it dropped and continues until completed – no manual intervention is required.

No File-Size Limits

Differs from virtually every other file-transfer solution because it has no file-size limitations, and can handle the transfer of very large files at the highest volumes.

High Availability/Clustering

Supports clustering for failover support and reliability.

All Platforms

Supports all platforms including UNIX, Windows, Linux, zLinux, IBM z/OS Mainframe, or iSeries.

Efficiency

Maximizes organizational efficiency with end-to-end processing, transfer scheduling, and event-driven transfers.

Cost Savings

By promoting process automation and efficiency gains throughout your organization the agency can achieve substantial reductions in operating costs.
