

CFI Internet Server with RocketStream

Typical Deployment:

In this deployment scenario, CFI Internet Server with RocketStream is accelerating the file transfer at speeds up to 30 times faster than FTP or standard commercial applications. A simple and intuitive .NET client is used to initiate transfers to and from remote locations and/or external business partners. Internet Server can integrate with all major platforms on the backend, including Windows, UNIX (AIX, HP-UX, Solaris), Linux, zLinux, iSeries, and the Mainframe.
